CATERPILLAR FULL YIELD From Uneven Crops

By Using the
**WINDROW
SYSTEM**
With

CATERPILLAR COMBINES

When crops are ripening unevenly, when green weeds or adverse weather conditions prevent straight combining, the "CATERPILLAR" WINDROW SYSTEM will solve your harvesting problems. Crops are allowed to cure and ripen uniformly for easy, thorough threshing. Prevents loss of grain from several rehandlings and allows you to meet any harvest emergency.

CATERPILLAR

M. D. of Cereal

The council of the Municipal District of Cereal No. 242, met in the municipal office at Oyen, Alberta on Saturday, August 9, 1930, at 10 a.m.

All the councillors were present.

The minutes and the financial statements were read and approved.

The accounts and the road-work pay-sheets were passed. The wild land taxes levied for the year 1929 on the N.W. 23-24-5-4, were ordered cancelled.

Mr. W. J. Ada, councillor for Division No. 5, was appointed a committee to mark the road allowances in the Hamlet of Laidlaw.

The council passed By-law No. 65, making grant of \$30.00 to the Oyen School Fair and \$20.00 to the Cereal School Fair.

The Secretary was instructed to send notices to all tenants to pay the taxes due on the land to the municipal district direct. The Secretary was authorized to seize for taxes in certain cases.

The correspondence was presented to the council and dealt with.

The council adjourned to meet again on Saturday night, September 13, at 7 p.m.

J. P. Rorabeck, Sec.-Treas.

Eighth Fortnightly Crop Report August 9, 1930

As harvest approaches the condition of crops throughout the Province is better than was anticipated earlier in the season. With the exception of the south-eastern part of the province, Central eastern areas crops are good. In the eastern area where conditions were unfavorable throughout the early part of the growing period late rains have caused excellent growth of oats and barley, and if the frost free period is prolonged, there will be fair yields of wheat.

The hot dry weather of the past fortnight has caused too rapid ripening of crops in the south eastern part of the province, where moisture was not plentiful. In the central and northern area where heavy rains fell during July and where crops were maturing slowly, these high temperatures have caused more rapid ripening without serious injury to quality.

Wheat cutting has commenced in the south and will be general next week. Throughout the central and northern parts cutting will be general in from ten to fourteen days.

Frost has been reported from one point in the Peace River district, but damage seems to have been very slight. Hail damage has occurred at several points throughout the province.

Conditions with regard to pasture, hay and feed are fairly satisfactory. In the alfalfa growing areas, the second growth of alfalfa is fairly heavy and of excellent quality. The sugar beet crop is better than the average.

The Toronto Industrial Commission announces that between January 1 and June 26, 15 new industrial firms have come to Toronto, with which the commission has co-operated. Of these, 11 had their origin in the United States and 4 originated in other parts of Canada. The list of these new industries includes a number of outstanding companies whose entrance into the assembling and manufacturing field in Toronto means an important growth and development in the city's industrial life.

Harvesting Commenced

Harvesting the 1930 wheat crop was commenced last Friday in this district. Each day sees more binders in the field and this method of reaping the crop will be quite general the latter part of this week. Crops have been ripening fast in the last week of hot weather and it is expected that combines will be in the fields next week.

At this stage of harvesting, it is difficult to give an estimate of the probable average yield, but this district is more favorably situated than many towns along the line where considerable damage was done by hail.

Farmers are invited to report their yields at the News office when threshing is commenced.

Navy League Head Thanks Oyen

Mr. Fred Cooke, Provincial representative of the Navy League of Canada, who has been in Oyen on his annual visit collecting subscriptions to the Sailor Magazine and donations for the Navy League, thanks the citizens of Oyen for their loyal support to the Alberta division as the sum of \$22.00 has been given.

The Navy League of Canada assists the widows and orphans of the men of the merchant marine. The league also supports the sailors' homes and institutes etc., in all the large Canadian ports from coast to coast, to make better Canadian citizens of them.

The Sailor Magazine is fast growing—it is now published every quarter.

Subscriptions to the magazine and renewals as well as donations to the Navy League can be sent to: Victor J. Ward, Esq., Secretary-Treasurer, his address is 2109, 24 St. East, Calgary, who will issue receipts.

Fairy Rhymes Come True

"Hey diddle, diddle!
The cat and the fiddle,
The cow jumped over the moon . . ."

In our childhood days we accepted the above as gospel, the world being then new and wonderful where anything might happen. But it remained for the year 1930 to make it partly true with the airplane flight of Strathmore Hanna Fairchild, prize Holstein calf of the C.P.E. Experimental Farm at Strathmore, to Calgary and back. Little Hanna whose mother's half sister is the famous Strathmore Sylvia with a record of 29,371 pounds of milk in one year, was cind for her journey in a pneumonia jacket. Her feet were secured and a strong ace placed around her up to the neck. She lay quiet in the plane and seemed to like her. The report shows Hanna who was named after John H. Hanna, secretary of the Calgary Board of Trade, greeted by a number of

leading Calgaryans and visitors on her arrival. Instant shows her peering out of her pneumonia jacket aboard the plane.

NEW CABINET IS ANNOUNCED BY PREMIER

Ottawa, Ont.—The following is the list of the new cabinet in order of precedence:

Hon. R. B. Bennett, Prime Minister, President of the Privy Council, Secretary of State for External Affairs and Minister of Finance.

Hon. G. H. Perley, K.C.M.G., Minister without Portfolio.

Hon. E. N. Rhodes, Minister of Fisheries.

Senator Gideon Robertson, Minister of Labor.

Hon. H. H. Stevens, Minister of Trade and Commerce.

Hon. Hugh Guthrie, Minister of Justice and Attorney General.

Hon. R. J. Manion, Minister of Railways and Canals.

Hon. E. B. Ryckman, Minister of National Revenue.

Hon. J. A. Macdonald, Minister without Portfolio.

Hon. Arthur Sault, Postmaster General.

Hon. Col. Murray MacLaren, Minister of Pensions and National Health.

Hon. H. A. Stewart, Minister of Public Works.

Hon. C. H. Cahan, Secretary of State.

Hon. D. M. Sutherland, Minister of Indian Affairs.

Hon. Alfred Durneau, Minister of Marine.

Hon. Thomas G. Murphy, Minister of Interior, and Superintendent-General of Indian Affairs.

Hon. Maurice Dupré, Solicitor-General.

Hon. W. A. Gordon, Minister of Immigration and Colonization, and Minister of Mines.

Hon. Robert Weir, Minister of Agriculture.

In announcing the personnel of the new cabinet, Premier R. B. Bennett made the following statement:

"I will administer the department of finance until such time as arrangements I have made for a successor can be completed, which will not be until after the short session. This session will be called at the earliest date legally possible.

The Hon. Gideon Robertson at my request becomes Minister of Labor." Senator Robertson administered the department during the serious unemployment of 1920 and 1921.

Lost Prospectors Found

Discovered After Spending Twenty One Days In Northland

The Pas, Man.—Harry Cairns, prospector, of Baker's Narrows, and his 15-year-old son, who were lost 21 days in the northland wilderness, were found safe and well last Thursday.

They arrived here by the train, and a Victoria Vedette plane, piloted by Sgt. Tourgis, R.C.A.F.

The long search has ended, a search that called upon the best brains of the wilderness to map out and carry through a search that even veterans of the trail found baffling for a moment, which terminated eight miles from the copper claims camp of the prospectors.

For 21 days father and son tramped the burnt-out country, wallowed in the muskeg and fought on, ever hoping that they would strike a friendly trail or a landmark they knew. For the first five days they were drenched by thunder storms.

For the first five days they tasted no food and knew no shelter, then they came upon blueberries, nearly ripe.

They constructed a shelter of spruce boughs, using bits of string to pull together their tattered clothes, and waited for the warm rains to ripen the berries. George the boy, was failing, his boots had given out and his feet were sore.

He had to be carried in his arms for signals nor for warmth at night. During all that time, close as they were to the railway, they heard no locomotive whistles and saw no signs of a living creature.

Then they heard men shouting in the bush while they waded on a rocky point of a strange lake and heard to signal low flying planes. A mile later, E. R. Patin, a veteran prospector, and W. L. Caldwell, came upon them. They were taken to their camp.

Jap Warships For Trouble Zone

Tokio.—Four Japanese destroyers steamed from the Saeco naval station for Shanghai to aid in protecting nationals along the Yangtze river valley. The warcrafts were ordered to proceed to Hankow and then to the Yangtze, owing to the serious situation which has developed along the valley since the outbreak of Communist disorders in Hunan and Kiangsi provinces.

W. N. W. 1850

Lack Of Moisture Detrimental To Crops

Much Uncertainty Exists As To The Probable Yield

Ottawa, Ont.—"Although the western crop is generally well advanced in the filling stage, there is still much uncertainty as to the probable yield," states the crop report issued by the Dominion Bureau of Statistics.

Lack of moisture in Saskatchewan and southern Alberta and damage from rust in Manitoba and southern Saskatchewan are features of last week's reports. Alberta crops alone have registered an improvement in the past two weeks, the large central area being again benefited at the last week-end by good rains.

Cutting of early wheat and barley is common in all three provinces, with indications that harvest will be general in a week or ten days.

Wheat crops again been hot and dry, with central Saskatchewan plants registering over 100 degrees on the Fahrenheit scale.

Effective precipitation fell only in central Alberta.

Moisture varies greatly with date of maturity, variety, and stand of the crops. Although variety weather conditions will have an important effect there is every expectation that the damage will be light on early maturing, light crops. But loss on the good crops is not yet later.

The telegraphic report from the Dominion rust research laboratory at Winnipeg for this week reads as follows:

"In Manitoba, hot dry weather of past week has hastened maturity of cereal crops. Cutting of early fields of wheat and barley is now general in central and southern part of the province. Loss from rust will be heavy in about sixty per cent. of fields of common wheat in area included within radius of 25 miles from Winnipeg."

Because of hot, dry weather, stem rust has not increased rapidly in Saskatchewan but has spread southward to Pontifex and southwest to Shaunavon. Severity of infection about twenty per cent. on common wheat in eastern Saskatchewan. Durums have only traces of stem rust. No stem rust reported in Alberta.

Hon. Thomas G. Murphy, Minister of Interior, and Superintendent-General of Indian Affairs.

Hon. Maurice Dupré, Solicitor-General.

Hon. W. A. Gordon, Minister of Immigration and Colonization, and Minister of Mines.

Hon. Robert Weir, Minister of Agriculture.

In announcing the personnel of the new cabinet, Premier R. B. Bennett made the following statement:

"I will administer the department of finance until such time as arrangements I have made for a successor can be completed, which will not be until after the short session. This session will be called at the earliest date legally possible.

The Hon. Gideon Robertson at my request becomes Minister of Labor." Senator Robertson administered the department during the serious unemployment of 1920 and 1921.

Plans To Visit Argentina

Prince Of Wales May Pay Visit To South American Kingdom

London, England.—The Prince of Wales, who, among his many other roles, has been called the British Empire's "best travelling salesman," plans to visit Argentina and Brazil next year, it became known recently.

The visit of the Prince to Buenos Aires will be for the particular purpose of opening the British trade exposition.

The first official announcement came from Buenos Aires when Ambassador MacLaren informed President Rigodon that the Prince of Wales would make the visit.

"Unfortunately," said the ambassador, "the British heir will extend his visit to Brazil, but it was not known whether he would visit other Latin-American states."

Reports that the Prince would visit the United States next year have been definitely denied.

Famous Bands May Come

Endeavor To Secure Musical Attraction For 1931 Western Fair

Brandon, Man.—Another outstanding band may appear on the western circuit of the Class "A" exhibitions in 1931. At the recent meeting held in Regina, it was the opinion that at least two famous bands might be open to engagements and communitarian.

WRITS ISSUED FOR FEDERAL BY-ELECTIONS

Ottawa, Ont.—Writs for by-elections necessitated by appointments to the new Conservative cabinet have been issued.

Nomination day in all instances except in the case of Premier E. N. Rhodes, of Nova Scotia, will be on August 25. Polling day is named for September 2 in 10 constituencies, and for September 8 in five ridings where, under the Dominion Elections Act, two weeks must intervene between nomination and polling days.

Announcement of the issue of writs was made by Premier R. B. Bennett. The statement came from the new prime minister following the first meeting of his cabinet after taking office earlier in the day.

A political discussion engaged the balance of the day. A contest for the newly-appointed cabinet. In political circles no opposition is expected in any constituency, and in this eventuality writs for the by-elections of the ministers may be returned immediately after nomination day. The aim of the administration is to hold the special session "at the earliest date legally possible"—in the opinion of the premier, the impression is that parliament may convene on September 2.

There is no indication in regard to the constituency Premier Rhodes will represent. It is understood, though, that steps are being taken in this matter.

Hon. H. H. Stevens, who was defeated in Vancouver Centre, will be a candidate in East Kootenay. Mr. McLean, elected as a Conservative in the constituency, has resigned to represent Mr. Stevens.

The five constituencies in which a lapse of two weeks must intervene between nomination and polling day—in case of East Kootenay, Mr. McLean, elected as a Conservative in the constituency, has resigned to represent Mr. Stevens.

</

Utility Of The Dirigible

Larger Ships Need To Make Commercial Ocean Flights Successful

Airships of the R-100 type can never compete with the present methods of transportation over short distances, but came into their own when events are to be covered. Wing Commander R. B. R. Colmore, of the British dirigible R-100, told the Canadian Club at a luncheon in Montreal recently. Major G. H. Scott, an official observer on the R-100, who was in command of the R-34, when the first airship crossing of the Atlantic was made 11 years ago, also addressed the club and described the recent flight across the Atlantic and up the St. Lawrence, which was practically the same as on board ship, even down to a nightcap of rum or a whiskey and soda.

The speeches were broadcast over Canada and the United States. Wing Commander Colmore said the R-100 and British's other dirigible, the R-101, were experiments. They were built after most exhaustive tests had been made of every part of them. The experiment ended when the R-100 tied up at St. Hubert. He thought the lesson learned from the flight was larger airships were required to make commercial ocean flights successful. They must be able to carry more fuel and enable the dirigible to maintain a uniform speed of 70 knots. The R-100 could not do this.

Major Scott said the trip across the Atlantic itself would have been rather boring to a passenger as it was so uneventful.

He said the equipment and mooring mast at St. Hubert, where a dirigible was set in tieing up a British dirigible when the R-100 "decked," were the most up-to-date in the world, and they hoped to use it very often.

Rush For Homesteads

Applications For 70 Homesteads Filed In One Day

The frenzied rush for free lands in northern Saskatchewan, which reached its peak at the Dominion Lands Office at Prince Albert on the final day of Dominion control of Saskatchewan's natural resources—resulted in applications being filed for 70 homesteads. Believing free grants on homesteads might end with the expiration of Dominion control over the lands office, prospective settlers rushed into this city from many points to file on homesteads before the province formally took over control of its crown lands. The resulting large total of applications rounded the week's total out to 270 free grants.

Now that the rush has passed, it seems doubtful that the haste of the settlers was necessary. The Saskatchewan Government has at no time considered withdrawal of this means of making land available for homesteading, according to reliable reports.

Actual filings at the Lands Office during this hectic week do not represent the total number of men who besieged the city building. Many of those who came great distances seeking new lands found no arrival that certain homesteads they had set their hearts on had already been taken up.

Trees Need Lots Of Water

Trees need enormous quantities of water to keep them in a healthy condition. An apple tree 20 years old gives off approximately a barrel of water a day in summer, and a good-sized larch tree gives off nearly two barrels of water on a hot day. A single oak tree is known to have given off into the air in the form of vapor more than 100 tons of water in a single growing season—Official Record.

In 1799 part of a proposed English railway line was built. Any one with a cart whose wheels could pull it on the rails and let his horse pull it, provided he paid the tolls.

"Good day, Mr. Smith! How you have changed!"
"I'm not Mr. Smith."
"What! Heaven's sake, how people can change—Hummel, Hamburg."

W. N. W. 1850

Keep Good Company

Association With Criminals May Lead To Direful Consequences

Three men were hanged in Kansas City for the murder of a policeman when he obstructed the escape of bandits fleeing from a thwarted bank robbery.

None of the three who did kill the policeman. The actual slayer is one of two members of the band who so far have escaped arrest. But the three were engaged in a felony which led to the killing, and that made them guilty of first degree murder. Such is the law.

A harsh law? No. Every man in a bandit gang is ready to kill, or at least so justice must assume. The fact that John Doe fires the shot that drops the robbery victim, the policeman, or the bystander, in no way exculpates Richard Doe.

Suppose young John Brown, wayward son in a good home, is persuaded into accompanying two tougher young men on a filling station robbery. John Brown surely has no intention of killing anybody. The attendant not only resists, but seizes one of the other two youths, who pulls a gun and kills him in order to escape.

John Brown, out for a lark, thus becomes guilty of first degree murder, though he had no gun and fired no shot. If the scene of his crime is Missouri, he may be hanged; if Minnesota, he may go to the penitentiary for life.

That is how easy it is to become a criminal. Younger tempted to experiment with criminal activities should have impressed upon him the fact that the law will hold him responsible for whatever his more hardened companions may do—Minneapolis Journal.

Fair Play To Women

Miss Margaret Donfield Makes Appeal For Labor-Saving Devices In The Kitchen

Confessing that she herself knew very little about cooking, Miss Margaret Donfield, Minister of Labor, in the British Cabinet, made a spirited appeal for labor-saving devices in the kitchen at a meeting of the Abbey-Road Building Society. Women who had to cook had been treated, she said, in a "perfectly scandalous manner" in the past, and they should now be provided with "the right kind of workshop and the right kind of machinery to make cooking a pleasure instead of a drudgery." When cooking did become a pleasure, husbands, she prophesied, would want to do it themselves. It made her blood boil to go into houses where the best room faced the north and the larder the south.

One United States law, says William S. Dutton, has never been obeyed—and it never will be.

It reads: "When two trains approach each other at a crossing, they shall both come to a full stop, and shall start when the other is gone."

Swallowing a pin caused the death of a reindeer at the London Zoo recently.

CHAMPION MERMAIDS IN ROCKIES

Champion lady swimmers and divers of the United States invaded Banff and Lake Louise this month and gave thrilling exhibitions in the pools attached to the Canadian Pacific hotels at both resorts. Hundreds of guests at both hotels witnessed the show where skill and speed of superb natural beauty make a remarkable contrast with the ruggedness of the mountains. The team included, from right, Agnes Geraghty, Olympic swimmer; Catherine Ames; Lillian, metropolitan distance champion and Olympic swimmer; Constance Han, junior metropolitan champion; Eleanor Holm, national champion of the United States, 100 and 200 yards, back stroke; and Georgia Coleman, who is also just. All are from New York, except Miss Coleman, who is from Los Angeles.

Mental Hygiene

Percentage Of Mental Cases In Hospitals Is Increasing

Eighteen per cent. more patients are in hospital for mental diseases than in hospitals for physical diseases, according to a statement made by Dr. Haruch Silverman, Department of Public Health and Preventive Medicine, at McGill University, in a recent radio address on "Mental Hygiene."

Dr. Silverman said that accurate statistics recently showed that the range of mental disease expectancy is one in 22. This means that under present conditions within a generation one out of every 25 of the children in communities throughout the country will be admitted to mental hospitals and that a large percentage of them will remain in these hospitals probably all their lives.

Facilities for the treatment of early cases of mental diseases are practically non-existent. Dr. Silverman said, for under present conditions a person who develops a mild mental illness has to be kept at home, where he cannot receive proper treatment or he must be committed to a mental hospital. "There is an urgent need for the development of psychiatric wards for mental patients in general hospitals as a person with a mild mental illness may come for treatment in the same way as one who is physically ill."

In a mental hygiene program the scientific treatment of so-called nervous children and children whose behavior problems become one of the major considerations, the one fundamental principle to keep in mind is that behavior is brought about by causes which must be known before proper treatment can be instituted.

"Pro to anyone who has some contact with such problems it becomes obvious that a child's behavior results from the influence of the physical environment on his physical make-up. The only proper attitude must be one of scientific understanding followed by adequate treatment," he added.

From Feminine Viewpoint

Feminine "Journey's End" Is Proclaimed In London

Following the ideas of "Journey's End" but from a feminine viewpoint, "The Searcher" has been produced in London. "Journey's End" had its premiere by an amateur company but controlled entirely by the author. The author is Valma Fisher, and all the characters are feminine. The eight scenes depict the mental misadventure of a woman worker in an evacuation hospital during the World War. Long allusions to the virtues of conscientious objectors, and the sacrifice of the dead was declared not only in vain, but even cowardly.

"I thought you told me, sir, that you were a young man of regular habits," cried old Mr. Quenelush, as his new assistant reeled into the hall at night.

"So I am," responded the young man; "I am, this is one of 'em."

Plank Sidewalks

Owing To Lack Of Funds Plank Sidewalks Extensively Used In Western Canada

Millions of feet of thick lumber are being bought this summer, by cities of Western Canada—to build plank sidewalks.

There are enough plank sidewalks in cities, towns and villages of prairie Canada, to build a substantial corduroy road from the Rockies to the Great Lakes, and then have plenty for kindling, to spare.

Dr. Higgins, capital of Saskatchewan, already has 100 miles of plank sidewalks, and this year is building more. The city has ordered planks for more than 50 new walks.

Saskatoon, Moose Jaw, Edmonton and Calgary, all have their board sidewalks—of the same sort that belonged to the horse-and-buggy era of eastern Canada, and the United States. They have the same sort of pedestrian paths that many people on this continent have "heard" of the first time in the talkie pictures of the modern screen.

And here's the reason. In cities are built spacious in the open spaces of prairie Canada. Edmonton and Calgary, Alberta cities that have just reached their first 100,000 in population are individually larger than Toronto, in acreage. Edmonton is almost as large as Montreal or Buffalo. Moose Jaw is larger than the city of Hamilton, Ont., and St. Boniface, a city of 32,000 people, in Manitoba, is twice as large in acreage, as Ottawa, capital of Canada.

Such spacious acreages within the municipal limits, would call for enormous expenditure if concrete walks were built throughout the cities.

So there remains a big appetite for rough boards in the West and a breath of the atmosphere of old frontier days remains.

Canadian Clover Seed

Found To Be More Satisfactory Than The Imported Variety

The Seed Branch of the Dominion Department of Agriculture reports that the production of red clover seed in Canada in 1923, was a record in the quarter century. One of the most important of the legume crops, red clover grown from imported seed, has been produced in Canada, and is being produced in the extent to which it winter kills under severe northern conditions. The seed has been largely overcome through the planting of Canadian-grown seed which has become thoroughly acclimated, and which produces plants hardy enough to survive the Canadian winter. A good supply of such seed is now available.

Spider's Thread In Surveys

In the construction of surveyor's instruments, utilized for the purpose of surveying and mapping our country, use is made of a number of different materials. The most novel of these, perhaps, is the thread of the spider, which is placed in the optical system of the telescope as an aid in sighting upon delicate objects.

Hawaii's sugar production this year is estimated at nearly 900,000 tons.

Infant Mortality

Thirty Babies Die Every Twelve Hours In Canada

The following has been prepared by the Child Hygiene Section, Canadian Council on Child Welfare:

When we read of thirty babies dying in twelve hours, we are forced to think, "Why cannot something be done?"

When we realize that not only thirty babies die, but that every twelve hours during 1928, Canada lost thirty infants under one year of age, a total of 31,100 lives, we ask ourselves, "Why did they die? Could they have been saved?"

Lack of knowledge, or ignorance, definitely contributed to the death of 30% of these children; this ignorance was evidenced by the lack of ante-natal service, lack of satisfactory medical and nursing care at the time of, and following birth, and by artificial feeding, etc.

In co-operation with the Federal and Provincial Departments of Health, the Canadian Council on Child Welfare is making an effort to try to reduce this tremendous loss of life in Canada. A series of pre-natal and post-natal clinics, the latter covering the first year of the baby's life, and including habit-training, may be secured in French and English free of charge, by writing the Provincial Department of Health, or the Child Hygiene Section, of the Canadian Council on Child Welfare, 404, Plaza Bldg., Ottawa, Ont.

The Vicious Circle

Present World Wide Economic Condition Calls For Radical Remedies

Stomachs remain empty while wheat piles up in the elevators, and farmers dread a too good harvest. And as goods accumulate and men decay, production must be increasingly restricted. Unemployment grows. Purchasing power declines again. The vicious circle widens. The Soviet Union has now been in continual operation for nearly seven years.

Declaring that the increases of scientific agriculture, the march of civilization nearer the Poles and the increase in aerial navigation of the oceans, are the only scientific observations of Polar regions. Dr. Martin told the conference that a movement is now on foot to organize new expeditions for the next year on the anniversary of the first.

The plans so far include re-establishing the old stations and adding new ones, particularly in the Soviet Union. These observations are, in the results correlated and studied, or more safely say that a great many problems in meteorology will be cleared up," she said.

Interest In Polar Areas

Advent Of The Aeroplane Has Given a New Significance To Northern Territory

The advent of the aeroplane has given new significance to Polar territory and aroused interest of all great powers in areas to which they previously gave no attention. Edward P. Sullivan, editor of "Aviation" and former assistant secretary of the navy, told members of the Institution of Politicians.

Speaking before the conference on "Problems of Sovereignty in the Arctic and Antarctic," he pointed out that the shortest international air routes lie over the Arctic, although difficulties of operations in the region are acute. A number of years will probably elapse before regular air routes can be organized, he said, but the prospect is sufficiently real to have awakened the attention of great powers.

He mentioned Wrangel Island, Spitzbergen, Northern Greenland and Iceland as possible future bases, and said that where such areas are in doubtful status they deserve the protection and any valid national claims.

Dr. Laura Martin, geologist and geographer, of Washington, D.C., discussed the status of the Soviet Union on behalf of the British and his assertion that the Soviet Union is in point of discovery and exploration, said "British claims were backed by the MacDonald Government. U.S. claims were never backed by the United States. The Soviet Union has now been in continual operation for nearly seven years."

Declaring that the increases of scientific agriculture, the march of civilization nearer the Poles and the increase in aerial navigation of the oceans, are the only scientific observations of Polar regions. Dr. Martin told the conference that a movement is now on foot to organize new expeditions for the next year on the anniversary of the first. The plans so far include re-establishing the old stations and adding new ones, particularly in the Soviet Union. These observations are, in the results correlated and studied, or more safely say that a great many problems in meteorology will be cleared up," she said.

A Sure Refuge

Women Who Stand By Their Husbands In Times Of Stress

The capacity of women to stand by their men, their husbands, their sons and their brothers is one of their noblest characteristics. The innumerable number of men who have been taken to the front, the fear of losing their job—for increased taxes, even more than the fear of losing their lives—has made them a more valuable asset to the nation than ever before.

Yet how many thousands men who have been told their "services are no longer needed," going home in despair to tell the woman dependent on the bread-winner, dead from her lips, instead of tears. In what was, once, silent acquiescence in a husband who is a failure, the words of comfort, of aid, and of resuscitating faith—William Lyon Phelps in the Delinquent.

King George Takes Holiday

The King left London recently on his first holiday since his serious illness. The Queen accompanied him to Portsmouth, aboard the Royal yacht "Victoria and Albert" for a fortnight's cruise off the Isle of Wight. The King is expected to spend much of his time, especially during Cowes Regatta week, aboard his racing cutter "Britannia."

The fire department of New York City has a new water tower which is capable of shooting 28,000 gallons of water from its four nozzles a distance of 175 feet. The topmost nozzle can be extended 65 feet into the air.

A scientist in Switzerland has built a clock that is operated by expansion or contraction due to temperature changes.

Back To McGill University
Hon. Cyrus MacMillan, appointed Minister of Fisheries in the cabinet of Premier W. L. Mackenzie King previous to the opening of the election campaign, will, it is understood, return to his professional duties at McGill University next fall. Dr. MacMillan was defeated in the dual constituency of Quebec, P.E.I. He was professor of English at McGill at the time he entered the Liberal cabinet.

Improve Motion Pictures
George J. Spoor, pioneer in the motion picture industry, recently announced he had perfected after fourteen years a cinematograph camera, the success by which the stereoscopic effect of natural vision is given to the screen.

"Come out; bathing's forbidden."
"I'm not bathing; I dropped a fd. in and I'm looking for it."—Hummel, Hamburg.

Western Homesteads Can Be Beautified by Planting Flowering Shrubs About House and Yard

Far too many homesteads lack the finished effect that may be obtained by planting a few flowering shrubs about the house and yard. With shrubs there is nothing to fill the angles formed by fences or porches, or to screen unsightly objects, or to soften the abrupt angles formed by the corners of the building or where the foundation meets the ground; nothing to take away the bare appearance of the home and to give it an air of permanency and coziness.

The majority of people appreciate the beauty of shrubbery, and realize how much improvement can be brought about by its use, but for various reasons many fail to do any planting. The chief reasons for this neglect are probably the cost of planting material and the lack of knowledge as to what to plant. If all the planting material is bought at the store, the cost is in many cases prohibitive, and, if the work is to be done well, the labor involved will be considerable. For most people, however, it is not wise to attempt to do a great deal in any one year. A little planting done each year and done well will bring surprising results in a short time. The cost of many beautiful flowering shrubs is small; and everyone can afford to buy at least one or two each year. Some cannot be propagated easily by the amateur and therefore have to be purchased from a nurseryman. Others are easily propagated, and, when one specimen has been bought, it may easily be increased to supply all of that species that will be required.

Many rules for the arrangement of planting material have been given by experts from time to time. These frequently involve a large outlay and considerable study, but, while they may lead to wonderful results, they also have the effect of discouraging those who are able to do only a small amount of planting. This should not deter anyone from making a start. The greatest amount of pleasure will be found in arranging the shrubs to suit one's individual taste, and, in time one sees where an improvement could be made, the shrubs may easily be transplanted and rearranged.

There are a few simple rules which may help one to avoid common mistakes, but picture them as they may be too far from reality. When planting, allow them plenty of room to develop a symmetrical shape. If the earth is poor and consider chiefly of sub-soil thrown out from the cellar, dig a hole about three feet in diameter and about twenty inches deep. Fill it with good earth from the garden or yard, work in some well-rotted manure as the clay is filled in, and pack the clay firmly while filling. Then plant the shrub in the centre being careful not to have manure coming in direct contact with the roots. Water the surface occasionally for at least for the first two or three years, until the shrub is firmly established and has made considerable growth. When planting shrubs in a shady position, be careful to choose species that do well in the shade. Whenever possible visit the nearest Experimental Station during the growing season. This will assist in making a choice of varieties. Send for the nurserymen's catalogues and study them. They contain many valuable suggestions.

Sheriff is Appointed

Louis J. Howe is the new sheriff of Manitoba's eastern judicial district. Former deputy secretary for the province, his appointment to succeed the late Col. Rupert Inkster was announced recently.

Scientists have now produced an artificial silk from water and carbon dioxide gas.

"I hate going home," a wife never does anything in the house," "I must grumble," I've a nice wife. She makes my bed, cleans my books, and even washes my pockets."—Montague, Charlier.

Canadian Sugar Industry

Wages Paid By Eight Sugar Refineries Total \$2,748,396

The total amount of wages paid by the eight sugar refineries of Canada last year was \$2,748,396, a slight increase over 1928, according to a return issued by the Dominion Bureau of Statistics. Capital invested amounted to \$43,534,115, a decrease from \$45,028,818 in 1928.

The Canadian refiners employ 2,325 persons, of whom 2,018 draw wages and 307 are salaried.

The value of the products amounted in 1929 to \$47,151,960, which was a decrease from \$52,058,193 in 1928. In 1928 the gross value of the sugar products of the eight refineries was \$68,445,578.

Last year 32,556 acres were grown to sugar beets, with a yield of 7.23 tons per acre and a total yield of 236,465 tons. The average price per ton was \$8.84, giving the total value of \$2,080,900.

Food Preservative

Scientists Isolate Natural Agent In Milk Which Prevents Growth of Bacteria

A successful, non-poisonous food preservative may be obtained from cow's milk as a result of recent investigations reported by Dr. F. R. Jones and H. S. Simms of the Rockefeller Institute for Medical Research. These scientists were able to isolate the natural agent in milk which prevents the growth of micro-organisms. It is found in the whey after the routine separation of the butter-fat and casein. It can be obtained in pure form in a powder which keeps for several months. One grain of the powder added to a gallon of the ordinary medium on which germs grow will prevent their growth, it is reported.

Problems For The Farmer

Low Wheat Prices Create A Difficult Situation For The Grain Grower

With another year crop coming along and a large surplus still on hand from the previous year, the situation is far from cheerful. Everybody in an agricultural country such as Canada has a stake in the state of the farming industry, yet it will be conceded that the problem rests more heavily on the shoulders of the actual producer than anyone else. Difficulty is met in predicting the probable course of wheat prices for the reason that a year of small yields over any large section of the world's wheat growing area would be almost certain to lead to an advance in price that would make wheat growing look like a remunerative business to the producers who happened to have wheat for sale. At the same time there is a fairly widespread opinion that wheat prices are likely to remain at a lower level than has been the case during the last seven or eight years. This would indicate that the world is producing all the wheat that the world can afford to buy and that the surplus are responsible for the sharp break in prices.

Will it benefit Canadian farmers to grow wheat under the circumstances? If the wheat acreage is reduced, the surplus will be less, but there is any guarantee that the rest of the world's wheat will be reduced their acreage? Can the farmer of Western Canada be turned to some other form of farming that will be profitable? Can a change in farm methods make it possible for the Western Canadian farmer to grow wheat at a profit even when the price is low?

In the last analysis it appears to be the job of the farmer to suggest means for solving his own problem. It is in the hands of the farmer that this should be made known. If his methods are wrong they should be corrected. It is possible that many successful farmers in Western Canada who should be able to throw some light on the problems that confront the country's basic industry. Regina Leader-Post.

Mining In British Columbia

Increases Quantity Production In The Aggregate Of Metals

Despite world-wide depression in the mining industry, following the drop in metal prices, mining in British Columbia during the first half of the year has shown encouraging progress, according to the monthly bulletin issued by the provincial Department of Mines.

There was increased quantity production in the aggregate of mineral and metals, but owing to low metal prices, the gross value dropped from \$54,122,732 in the first half of 1929 to the estimated \$29,909,487 for the first half of 1930, a decline of more than 12 per cent. Among the unworkable features are included the rather uncertain outlook for any material movement in silver and zinc prices for some time to come, which may cause certain hitherto productive mines in British Columbia to remain closed. The value of gold production also fell away 15 per cent.

Trade With Japan

Howard Marler, son of the Canadian Minister to Japan, made a statement, while passing through Winnipeg recently, to the effect that there is a splendid opening for Canadian manufacturers in Japan. Although trade is rapidly developing, in point of fact, there is still a great need for manufacturers to appoint representatives in the Far East.

Girls are now forbidden to powder their noses in Rumania. They will be a shining example to the rest of the world.

"ROUND A CANADIAN CAMP FIRE"

On the terrace of the Banff Springs Hotel recently the above-named ballad opera was presented by the Alfred Heather Light Opera Company, now giving a two-month season of Canadian and Old English ballad operas at the hotel. The Topper, big fire, covered seats and even a portable organ were among the props and hundreds of guests were shown what an evening camp and sing-song are like. The Opera Company was assisted by Trail Riders of the Canadian Rockies seen clustered around the fire. The scene will live long in the memories of those who witnessed it.

Watering The Garden

Use Of Watering Can Largely Wasted Effort, Says Expert

The use of the watering can in the garden is largely a waste of effort, declares W. D. Albright, superintendent of the experimental station of the Dominion Department of Agriculture, at Beaverford, Alberta. If the same effort is spent on keeping weeds out of the garden it will result in more soil moisture being conserved for the growing plants than it is possible to give them through the use of the watering can, he states.

It requires at least one half-inch of rainfall to moisten a dry soil deep enough to reach many of the feeding roots on the average plant. And, even with such a rainfall, much of the moisture is lost through evaporation before the plant roots are reached. The average application from a watering can is such less in volume and under many conditions it is much more subject to rapid evaporation than a rainfall.

Half an inch of rainfall provides moisture equivalent to a half inch of water to every square yard of garden. It is equivalent to a square inch of water to a square foot, or 2.40 pounds for a garden eight feet by ten feet. From this it will be apparent that the watering can is a garden a man-sized job.

Weeds are the greatest menace to garden crops, particularly because of the extent to which they rob the soil of moisture needed by garden plants. The most effective way of getting rid of weeds is to keep the soil moist. The average gardener in the use of the watering can was expended in applying the hoe to keep weeds under control. It would insure the conservation of more moisture to the growing plants than can be provided in the same length of time through the use of the watering can.

The most effective way of watering the garden is to dig a trench with a hoe near the plants or to punch holes and pour water into these. This brings the water more directly in contact with the feeding roots and prevents evaporation. Not only is much water lost when applied with the watering can but it frequently improves the physical condition of the soil by puddling the surface.

Population Increasing

Canada's Population Estimated At 9,953,500 By Ottawa Bureau

Canada's population on June 1, has been estimated at 9,953,500 by the Dominion Bureau of Statistics. This represented an increase of 137,700 over 1929 estimates.

In a report recently issued, the bureau gave the following figures as the estimated population of each province and territory: Prince Edward Island, 85,800; Nova Scotia, 323,900; New Brunswick, 423,400; Quebec, 2,734,000; Ontario, 3,313,000; Manitoba, 671,500; Saskatchewan, 828,000; New Brunswick, 423,400; British Columbia, 597,000; Yukon, 3,700; and the North West Territories, 8,600.

The following figures show the growth of Canada's population during the past decade: 1921, 8,788,483; 1922, 8,906,000; 1923, 9,028,000; 1924, 9,151,000; 1925, 9,269,000; 1926, 9,390,000; 1927, 9,518,000; 1928, 9,638,000 and 1929, 9,768,800.

Bounty On Coyotes

Payment of a bounty on coyotes, for which the farmers of British Columbia, especially the sheep men, have been agitating since the bounty was abolished last year, will be resumed under a recent order-in-council. The Department of Agriculture will pay the bounty at the former rate, viz. \$7.50 for coyotes, \$15 on wolves, and \$40 on cougars. Trained hunters may also be used to kill off predatory animals when necessary.

Surplus Of Wheat Is A World Condition And Not Restricted To Canada Alone

Successful Field Day

Manitoba Wheat Pool Sponsors Gathering At Brandon Experimental Farm

About 300 people from thirty-three points adjacent were represented at the successful field day arranged by the Manitoba wheat pool and held at the Experimental Farm at Brandon, B. J. Watson, local field man for the wheat pool, had charge of the arrangements.

The horticultural work being done at the farm under the direction of J. H. Cooper, was viewed by the visitors. Guided by R. J. Sigfusson, they then inspected the cereal plots where Mr. Sigfusson drew attention to the treatment of summerfall, comparing plowing summerfall with the use of the cultivator only. This allowed the cereal breeding plots.

The advantage of plowing under wheat stubble as a means of soil enrichment instead of plowing under grasses was evident when the party accompanied Dr. Buckley to view the winter crops were flourishing where land had been so treated. Prof. Harrison explained how to select the best seed plots for registration and seed or exhibition work. Adjustment was made to the tent where these problems were discussed further.

Mr. Mahoney, of the Wheat Pool, acted as chairman.

While the men were touring the grain plots the women were shown the results of poultry feeding tests with corn and grain mixtures. R. M. Hopper gave a demonstration of the best ways to cull poultry.

Wealth From Forests

Canada Is The Chief Source Of The World's Paper Supply

The forests of Canada are considered to be the chief source of the world's paper supply. During the past month Canadian paper has been exported to 32 countries, ranging from the alphabet right from Australia to Uruguay. Without the forests and paper mills of Canada, the business of supplying the world's news to the public would be seriously restricted. Canada has become so famous for her paper as for her wheat.

Most of the world's news is now supplied to the public by the paper mills of Canada. Much of Canada's forested area is being cleared for paper mills, and as the forests are removed for the manufacture of paper the land goes under the plough and is devoted to agricultural production. Forests, in such cases, are a source of income to the new settler, who receives cash for his pulpwood while clearing it off his land.

While Canada's principal export of paper is for printing purposes, it is an interesting variety of other paper products. Wrapping paper, writing paper and wall paper are exported to many countries, and in Japan more than a million pounds of paper wall boards for building purposes were exported to the United Kingdom alone.

Alberta Resources

Natural Resources To Be Handled Over To Province On October First

Alberta's natural resources will be formally handed over to the province on the first day of October, it was announced by the Provincial Government. An agreement providing for the formal transfer of the resources has been reached between the provincial and Federal Governments and has been signed in their behalf by Premier Brownlee and Hon. Charles Stewart, respectively. The effect of the agreement is merely to fix the cut-off date, having no relation to other terms of settlement.

Airplane Extension Course

New York University has announced an airplane extension course which will be inaugurated this fall. The project calls for the transportation by air of professors of the University of Toronto to a number of towns in New York and neighboring states where instructions in aviation will be given in grade schools, high schools and others.

More Workers Employed

In a report issued recently, the Dominion Bureau of Statistics, in analyzing the employment situation in Canada, said there were 21,296 more persons earning wages in Canada from July 1 last, than in June 1. From reports sent in by 7,281 firms, it was found that 1,043,332 workers were employed in Canada.

A man in love lives; a woman in love forgives.

Many People These days are disposed to criticize the Canadian Wheat Pool for the large quantity of wheat that has been sent over to this country into the new crop year, says the Monetary Times. Fair-minded critics, however, will not condemn their criticism somewhat when they become conversant with the fact that the surplus of wheat is a world condition and not restricted to Canada alone. Some weeks ago attention was directed in these columns to the fact that in the United States the situation was recognized as so important that the Department of Agriculture at Washington, got out a survey of the world situation, and suggested that a reduction of acreage by the American wheat farmer in conjunction with the wheat farmer of Canada would be the desirable course. The fact that the United States Government takes such action is a measure of the upsurge which was caused by the British policy of rubber plant restriction a year or two ago.

The Orient is generally indicated as the most likely part of the world to increase its consumption of wheat. The wheat people of the East are gradually becoming wheat consumers to a greater extent. This has been due, no doubt, to a variety of reasons, one of which may doubtless be traced to the large numbers of Chinese laborers employed during the great war in France. Many who saw service in France will remember the Chinese labor battalions dumping their wheat in the hands of the British. However, in the meantime, new areas of the Canadian West have been opened up, and the wheat crop and more land brought under the plough in Canada and Australia have also tended in the same direction and supply has increased faster than demand. The wheat people may be found with the Pool for its method of trading, they are not alone in the world for the fact that Canada will have a large wheat surplus.

Central Heating Plan

Central Heating Plans in Winnipeg Are Being Extended

In Winnipeg "central heating" does not mean a furnace in the basement of each house—it means a large central plant from which the heat is distributed to the schools, municipal buildings and residences. This principle of heating is not a new thing in Winnipeg, which was first electrified in 1924. The municipal electric plant which was required as a stand-by for electric power was utilized to provide heat which was piped through a certain area of the downtown part of the city. Electric boilers were installed and power developed on the Winnipeg River was used for the production of heat, which was not required for other purposes. An agreement providing for the formal transfer of the resources has been reached between the provincial and Federal Governments and has been signed in their behalf by Premier Brownlee and Hon. Charles Stewart, respectively. The effect of the agreement is merely to fix the cut-off date, having no relation to other terms of settlement.

Manitoba Power Surplus

Surplus of \$123,916 in the operation of the Manitoba Government Telephone System for the seven months period ending June 30 last, is reported. Revenue for the period totalled \$2,244,740.

The secretary of the Dixon, Illinois, club, says: "Even a tomahawk has a good word for a man when he is wounded."

Miss E. Caswell of Janina,
Sask., who has been spending a
vacation here visiting returned
to her home last Monday.

About Town and Country

Mr. George Benbow recently
underwent an operation for
appendicitis in the General
Hospital at Calgary. His
many friends in Oyen will be
pleased to learn that he is re-
ported to be making satisfactory
progress to recovery.

Mr. and Mrs. H. Munroe, Mr.
and Mrs. C. Caldwell and their
daughter Jane, Mr. and Mrs.
W. Owen, Mr. and Mrs. War-
wick and family, Mr. Harry
Austin and Miss Fergie, were
visitors at Gooseberry Lake
last Sunday.

Mr. and Mrs. J. J. Shields and
family, Miss Edith Bennett and
Mr. G. Goodall who have been
spending a vacation at Buffalo
Lake, returned to Oyen last
Friday.

Mr. and Mrs. J. P. Rorabeck
left last Monday for Nebraska,
where they will visit relatives.

Mrs. McArthur and Miss
Sutherland of Owen Sound,
Ont., are guests at the home of
Mr. and Mrs. Hugh B. Johnston
of Benton.

Mrs. J. C. Desso spent a few
days in Rosetown the latter
part of last week visiting Mrs.
T. W. Johnston and Mrs. Jack
Horne.

Look at your address label!

Mr. and Mrs. E. B. Brundage
and family left last Monday for
Byronmore, Alta.

Mrs. Arthur Campbell and
family who have been spending a
vacation at Kristina, Sask.,
and the national park near
Prince Albert, returned to Oyen
last Sunday.

A large number were present
at the ladies aid picnic held at
the home of Mrs. E. H. Church
last Wednesday afternoon.

Mrs. J. Love and daughter
Ruth, who accompanied Mr.
and Mrs. Lockart to Saskatoon,
last week, returned to Oyen
last Sunday. They were ac-
companied by Miss Dorothy
Love who will spend a short
vacation here.

Mr. and Mrs. Robert McLaren
and daughter Joyce left last
week on a two-weeks vacation.

Miss Anna Mitchell of Ver-
million is visiting her sister
Mrs. C. J. Gillespie.

Mr. and Mrs. G. S. Peck, who
have been on vacation visit-
ing their son Hubert at Cochrane,
returned to Oyen last
Monday.

Mr. and Mrs. C. L. Dunford
and family returned to Oyen
last night after spending a
week in Calgary.

Mr. and Mrs. Howard Cates
returned to their home Monday
after visiting at Castor. Miss
Mildred Cates, who has been
spending two weeks with her
sister Mrs. J. Brown in Castor
returned with them.

Miss Hazel Mahaffey who re-
cently arrived from North
Dakota, is visiting her mother
in Oyen.

Mrs. R. Forest is seriously ill
in hospital at Vancouver.

Mrs. W. F. Pratt and family
who have been spending a vaca-
tion at the coast are now en
route home, and are expected
in Oyen to-morrow.

Miss Ella Church left last
Monday to commence her
duties as teacher at New Haven
school (south-west of Sib-
bald).

Mrs. J. Green, who has been
visiting her parents at Battle-
ford, Sask., returned to Oyen
last week.

Mr. Norman Jackman, formerly
on the staff of the Bank of
Toronto at Oyen, and for the
last three years accountant in
the Calgary branch, is to be
married this fall.

Mr. and Mrs. G. A. Gosselin
and family left yesterday for
Wakaw, Sask., where they will
make the home. Mr. Gosselin
has been appointed principal
of the high and public schools
there.

Miss Pearl Harvey who has
been on relief duty at Albrook
Hospital, returned to Oyen last
Sunday night and is now open-
ing engagements.

Mr. and Mrs. George Morris-
on and daughter Margaret and
Miss Laura Gearing, returned
to Oyen last Sunday evening
after spending a vacation at
Banff and other mountain re-
sorts.

Constable Green who has
been away at Edson, Alta., re-
turned to Oyen last Wednesday.

Miss Annie Fergie was a Cal-
gary visitor the latter part of
last week.

SAFETY
at ANY speed

With the new Firestone Heavy
Duty Gum-Dipped Balloon Tires
you have a wide margin of safety
at ANY speed. Built in advance
of today's car requirements, they
withstand rough usage thru any
car on any road at any speed,
can give them.

Firestone Heavy Duty Balloons
are made of Gum-Dipped cord
construction—the strongest and
safest method known. They have
a deeper safety tread, extra
side-wall thickness and two extra
plies of Gum-Dipped cords just
beneath the tread to absorb road
shocks. They are the strongest,
safest, toughest tires that
Firestone has ever built.

Make your car safer for travel.
Equip it with a set of new
Firestone Heavy Duty Balloons.

The Oyen News

Broadcasting the R-100

When the R-100, Great Britain's huge new dirigible, arrives in the Dominion shortly, there will be no excuse for any Canadian being ignorant of her visit. The news will be broadcast throughout Canada by the Trans-Canada Broadcasting Company from coast to coast over the radio programme transmission system of the Canadian Pacific Railway Company's Telegraphs.

The arrangements will include a twenty-four hour service on the day of arrival and will be put out through stations in Quebec, Montreal, Toronto, London, Winnipeg, Regina, Saskatoon, Edmonton, Red Deer, Calgary, Vancouver, Fleming and Yorkton, Sask. Messages from the airship will be broadcast as she approaches the 75-mile radius and will include a description of the mooring one of the most interesting and exciting moments in the whole programme. This will be broadcast by E. D'Arcy Finn, managing editor of the "Ottawa Citizen" as chief announcer, during the two succeeding days by bulletin services and descriptions of special events. Lay-out shows the R-100 in flight; the kitchen of the air liner, and the St. Hubert mooring mast.
